## ***Introduction***

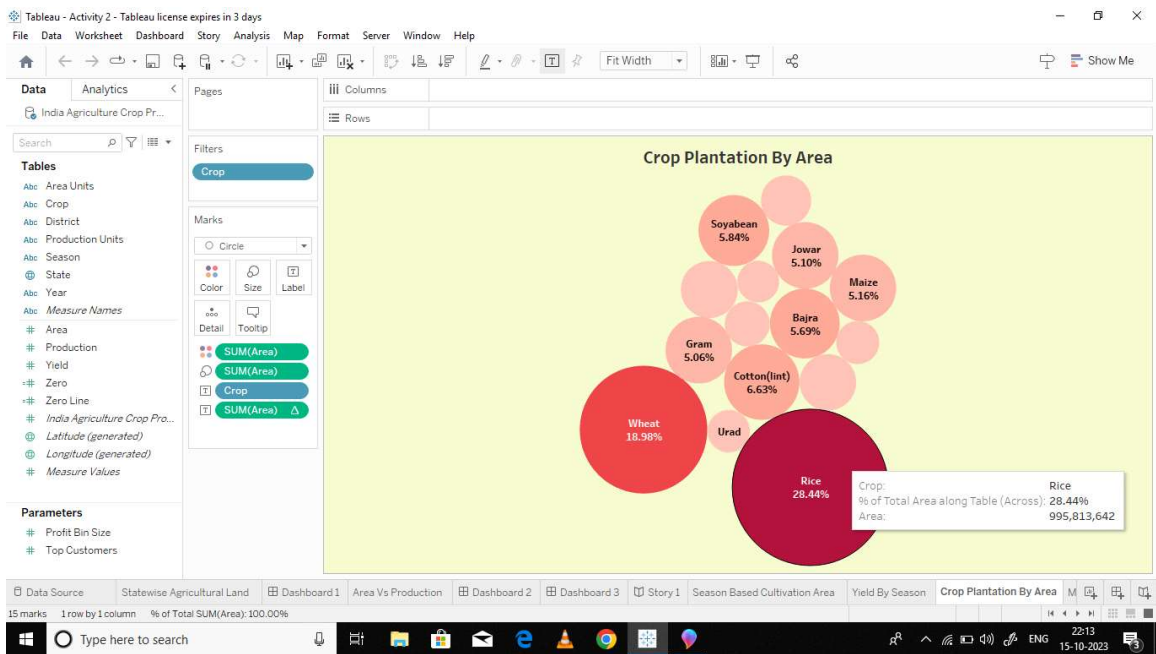

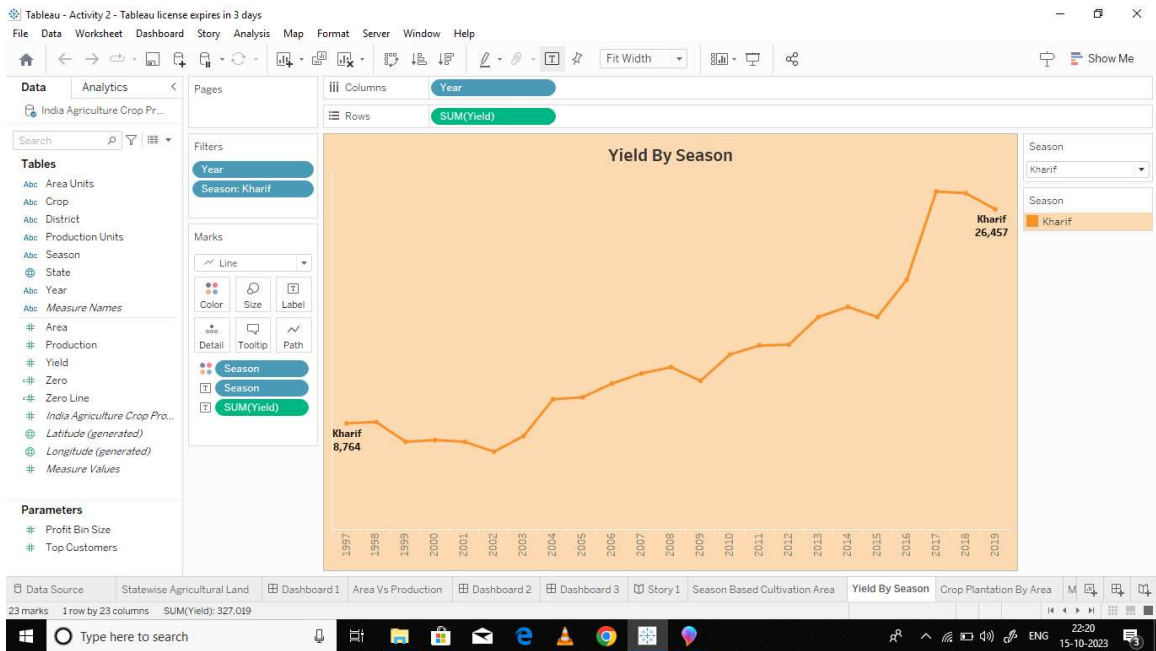

*Agriculture is the practice of cultivating plants and livestock in order to provide facilities the human beings. In the rise of the sedentary human lifestyle agriculture was the key development. The cultivation of plant and food grains began years ago in order to provide food to the city population.*

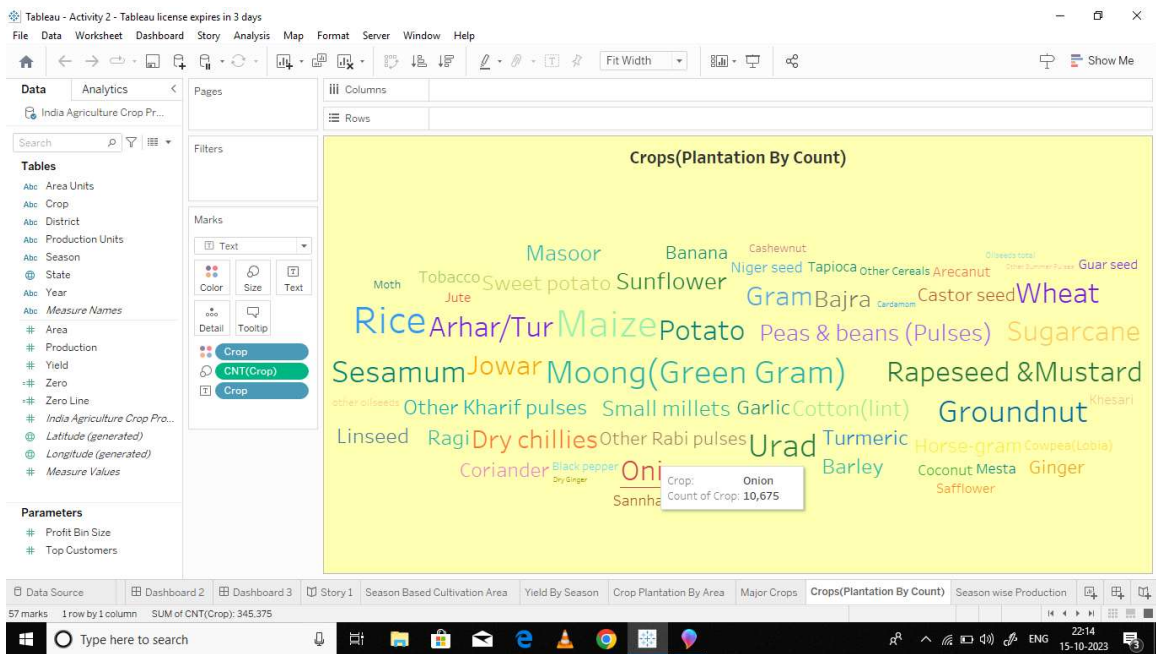

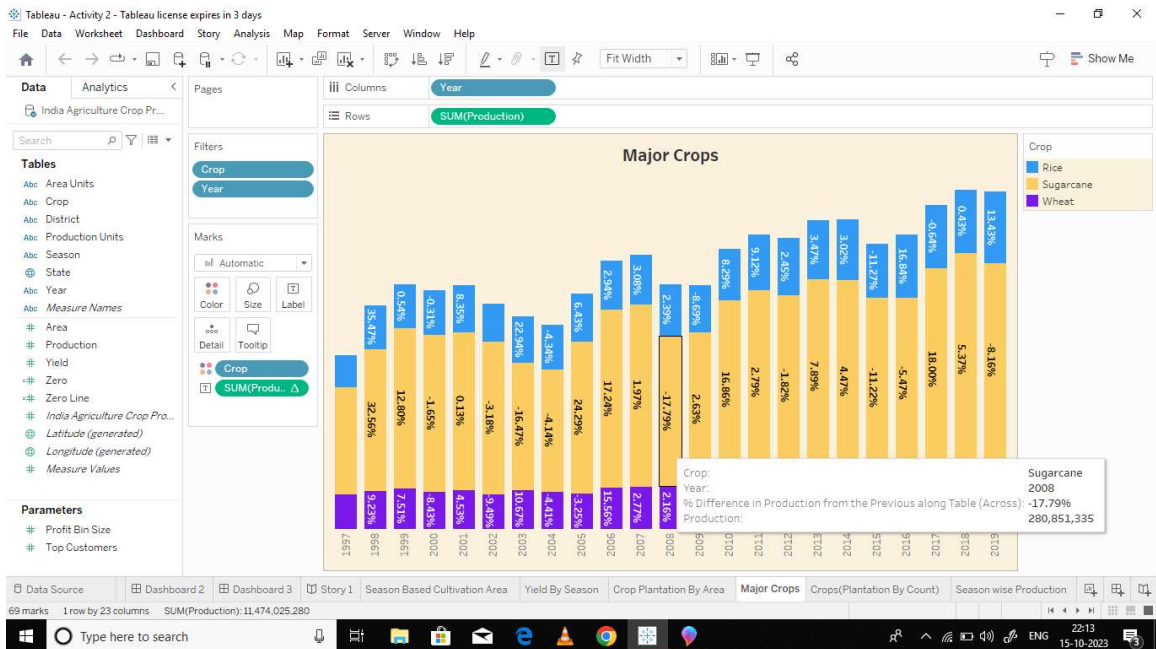

*It provides employment opportunity to the rural agricultural as well as non-agricultural labourers. It is the source of food and fodder .It also plays an important role in international business in import and export*

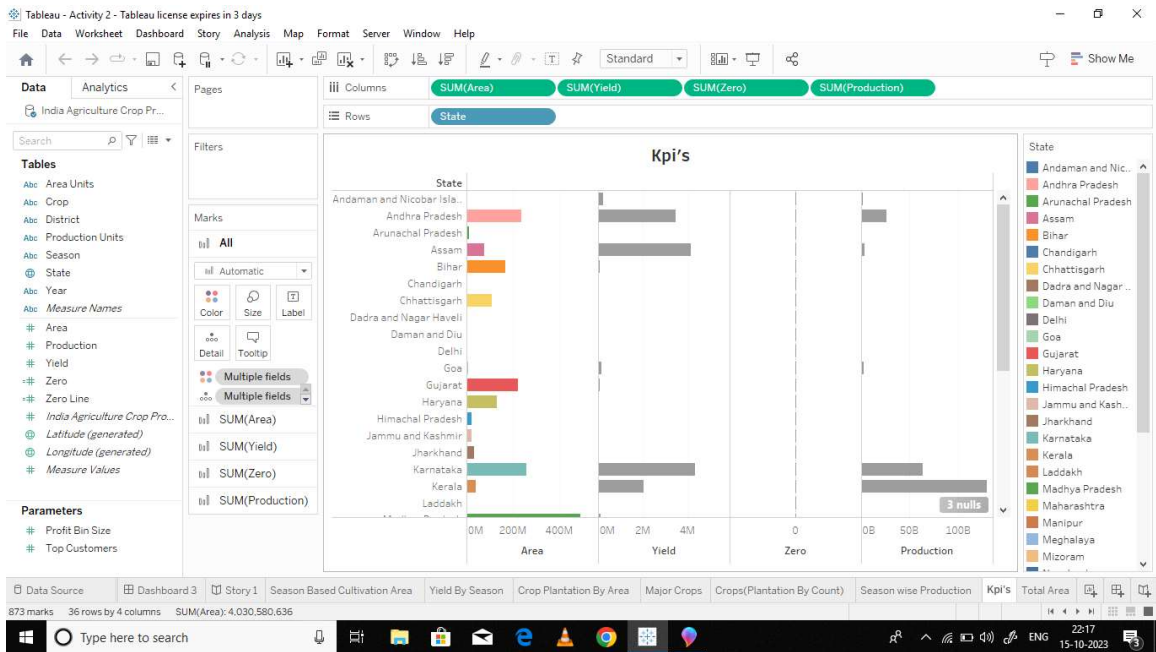

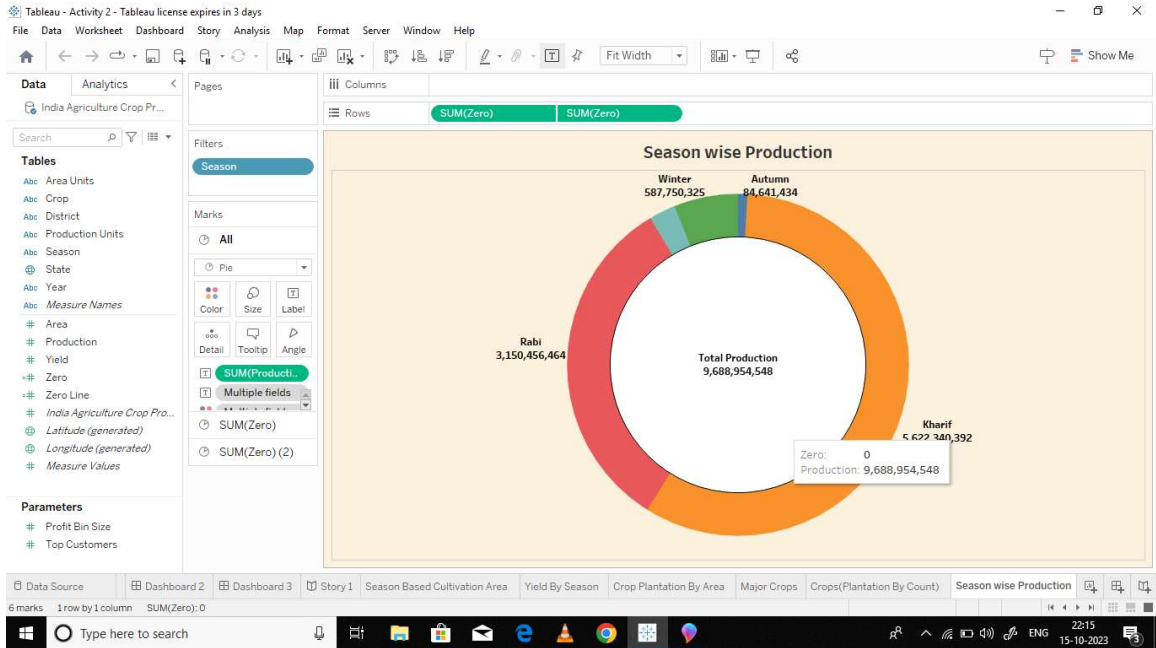

*activities.*

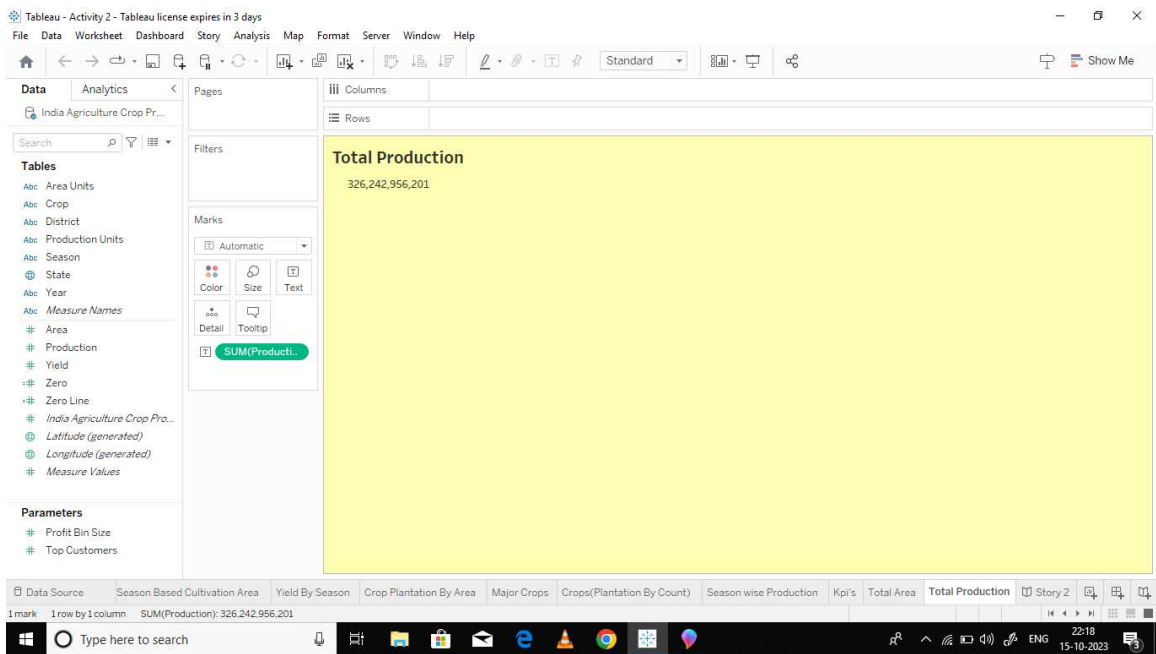

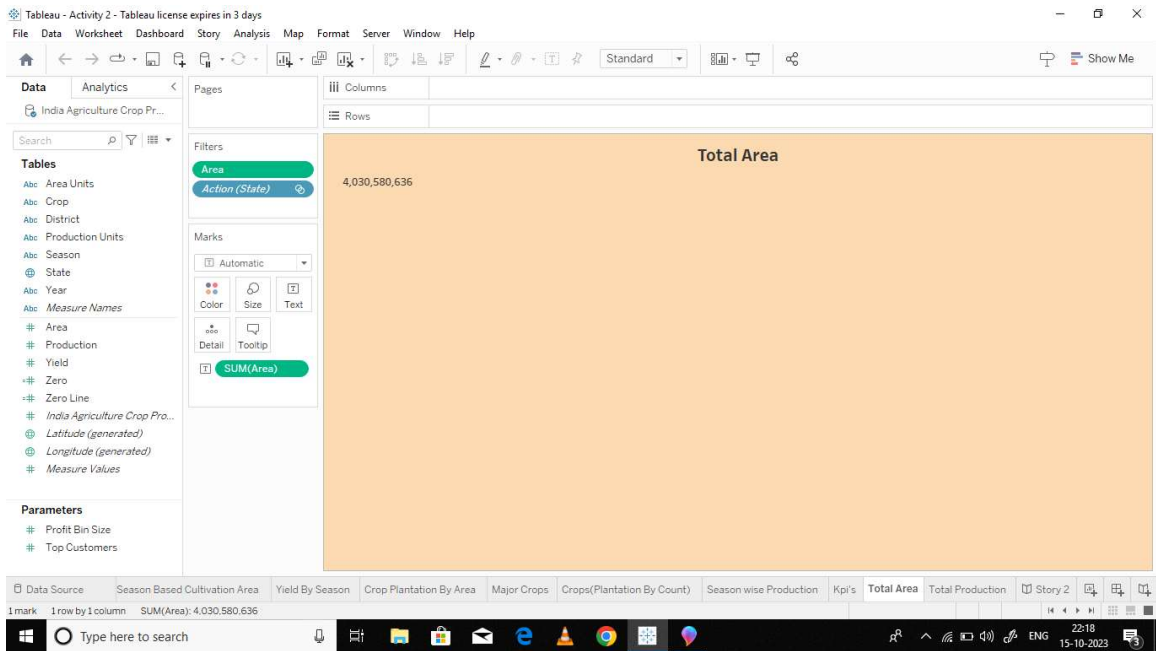

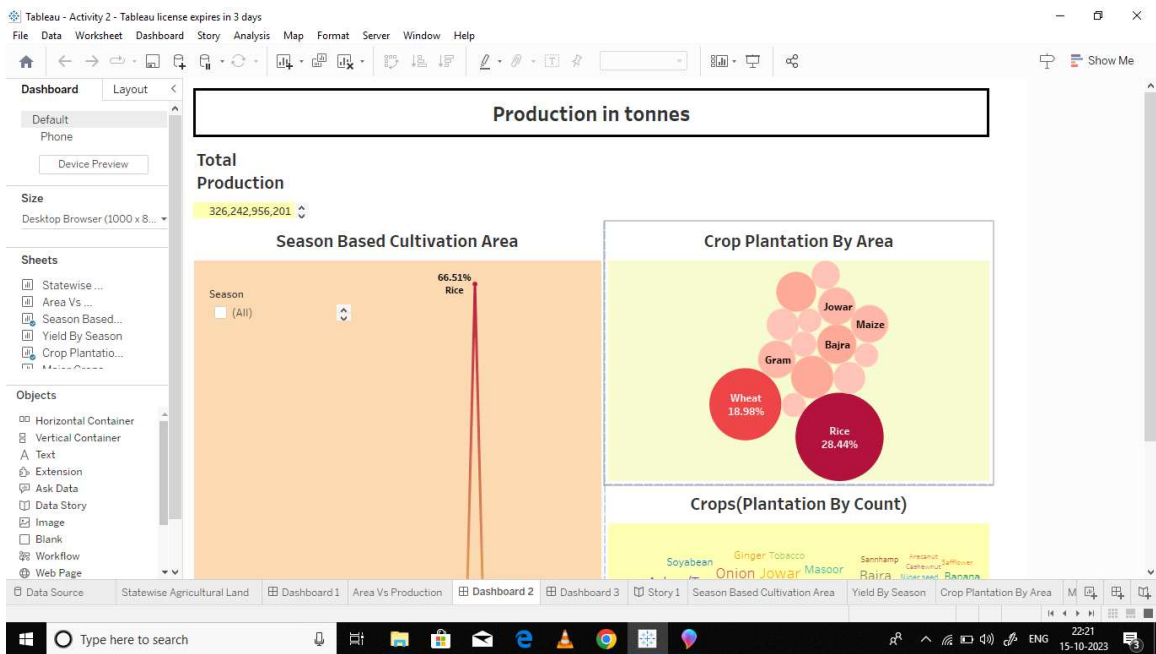

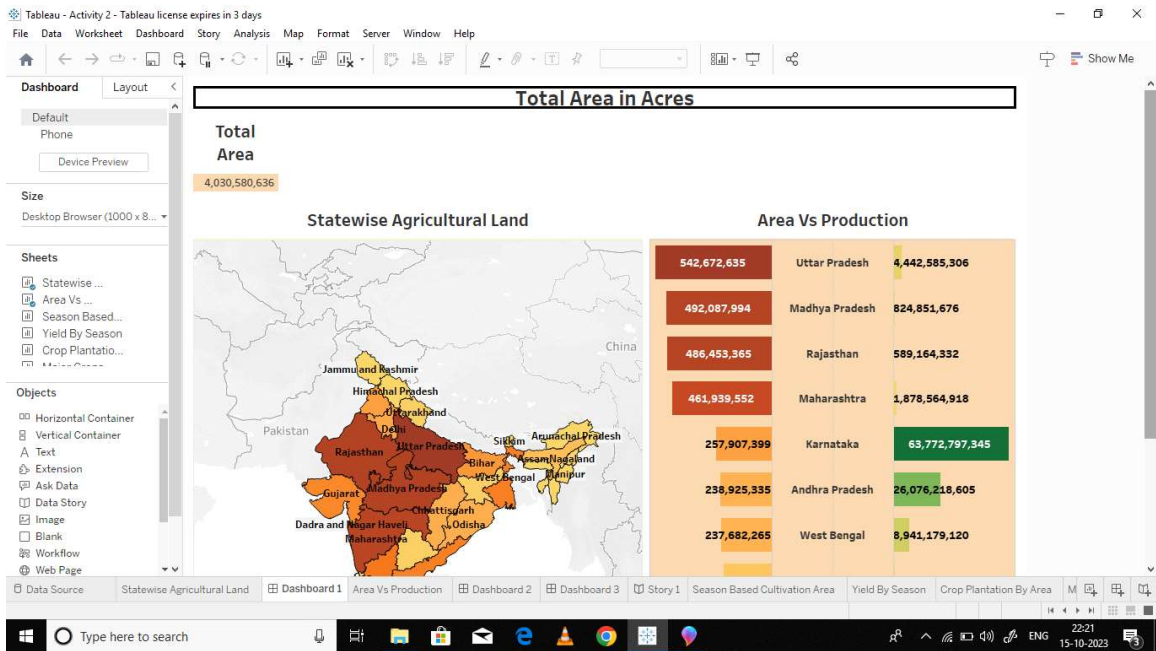

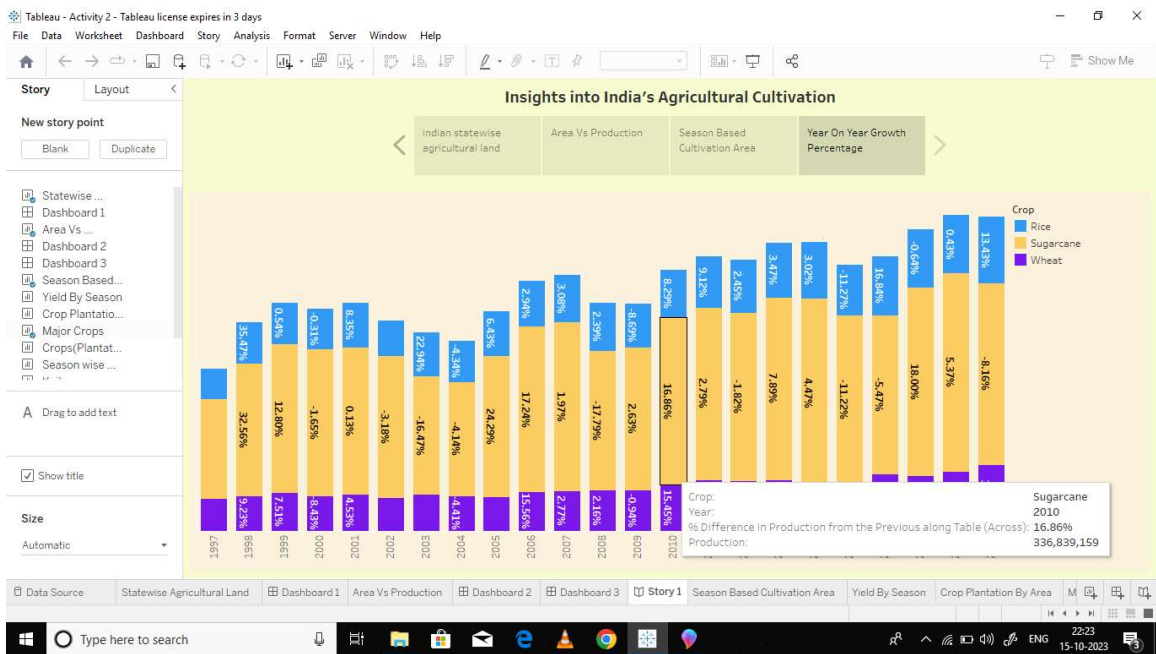

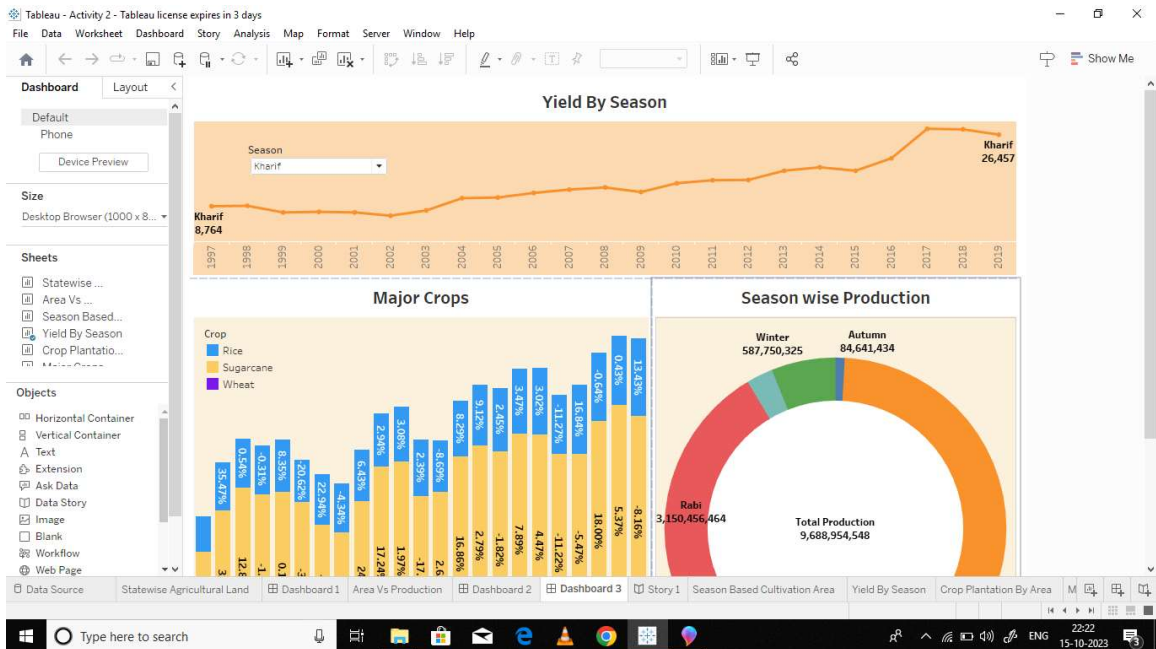

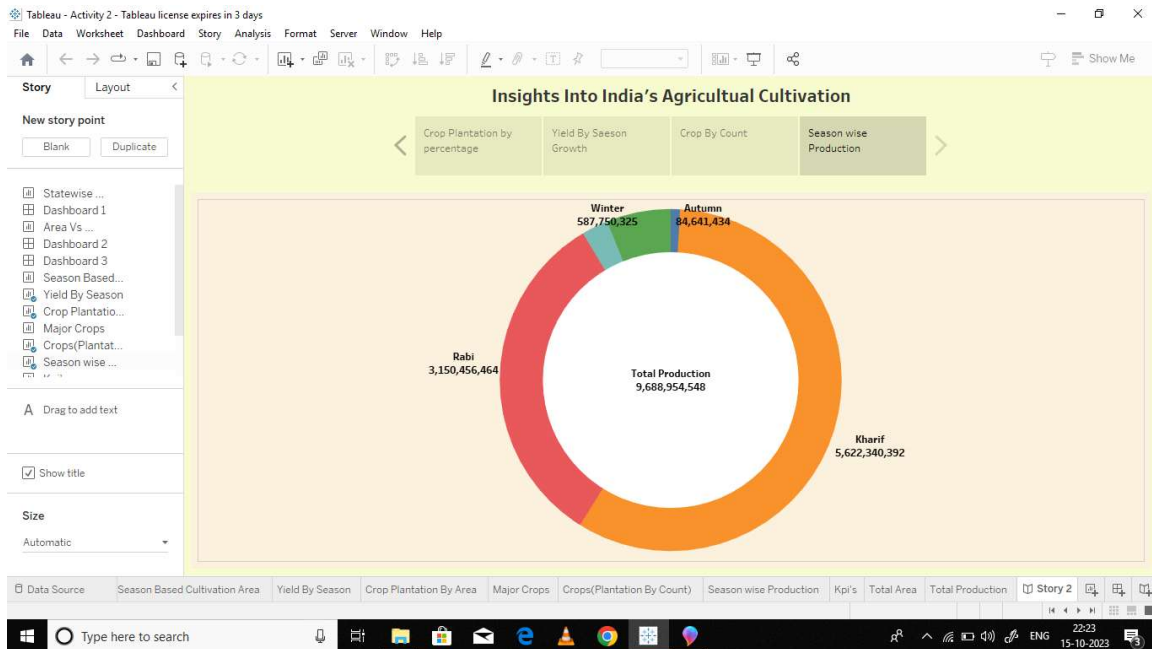

## **ADVANTAGES:**

***1.It ensures a stable and sufficient supply of essential nutrients and calories needed for people to maintain health and well-being.***

***2.Importance of crop production and its impact on the economy:Food security:Crop production is a primary source of food for human consumption.***

## **DISADVANTAGES:**

## **APPLICATION:**

*Tableau software is a versatile data visualization and analytics tool with applications in various industries and scenarios. Here are some common application where Tableau can be used:*

- 1. Business Intelligence (BI)*
- 2. Sales and Marketing Analytics*
- 3. Financial Analysis*
- 4. Healthcare Analytics*
- 5. Election Analysis*
- 6. Education and Institutional Research*
- 7. Government and Public Sector*
- 8. Non profit and social impact*

## **CONCLUSION:**

*Advantages included its ability to create compelling visualization, provide real-time updates, and facilitate customizations of dashboard. Agriculture has given so much to*

*society. But it has its own pros and cons that we can't overlook. Furthermore, the government is doing his every bit to help in the growth and development of agriculture; still, it needs to do something for the negative impacts of agriculture.*

### **FUTURE SCOPE:**

*Constantly evolving, and tableau courses can be enhanced to keep space with these changes. here are some potential enhancements that could be made in future tableau courses.*

*Enhancing Tableau's NLP capabilities could make it easier for users to ask questions in plain language and receive data visualization as responses, further democratizing data access.*
